

TABLEAU ANALYTICS PROJECT

Netflix Content Strategy

An End-to-End Data Visualization & Insights Deck Analyzing Movies and TV Shows
Catalog (2008–2021)

AMAYA SUDHAKAR

| Project Introduction

Understanding Netflix Growth

Netflix has transformed entertainment into a global streaming phenomenon, housing thousands of titles across diverse genres and nations.

This project conducts a comprehensive analysis of the Netflix dataset using Tableau, uncovering content production trends, global reach, and audience demographics.

| Data Source Overview

Kaggle Repository

Dataset curated from Kaggle containing listing data for 8,800+ movies and TV shows available on Netflix up to 2021.

12 Core Attributes

Features include Show ID, Type, Title, Director, Cast, Country, Date Added, Release Year, Rating, Duration, and Listed In.

Tableau Integration

Cleaned and modeled in Tableau Public to generate interactive KPIs, dynamic filters, and regional geographic maps.

| A Glimpse On Data Source

Field Name	Data Type	Description	Sample Values
type	String	Content classification	Movie, TV Show
title	String	Official title of the show	Stranger Things, Inception
director	String	Director name(s)	Christopher Nolan, Missing (Null)
country	String	Country of production	United States, India, United Kingdom
rating	String	Age certification rating	TV-MA, TV-14, R, PG-13
release_year	Integer	Original release year	2016, 2020, 2021

| Project Objectives

Content Ratio

Evaluate the proportion of Movies versus TV Shows in the platform's expanding streaming catalog.

Growth Trends

Analyze historical content addition patterns across different calendar years and release dates.

Geographic Footprint

Identify top content-producing nations and regional hubs driving Netflix's international expansion.

| Movies Vs TV Shows Split

Movies dominate the catalog volume, but TV shows represent higher viewer retention per title due to multi-episode engagement.

| Content Growth Over Time

Netflix content additions exponentially accelerated between 2016 and 2019, peaking before shifting towards strategic original productions.

| Top Content Production

The US leads total productions, while India and the UK form major global hubs for localized foreign content creation.

| Target Audience Ratings

73%

Mature & Adult Content

Dominance of TV-MA & TV-14

The vast majority of Netflix titles are rated **TV-MA** (Mature Audience) and **TV-14** (Parents Strongly Cautioned).

This highlights Netflix's core strategy: prioritizing young adults and mature demographics to drive individual subscription renewals over purely family-focused content.

| Dominant Content Genres

- ✓ **International Movies & TV:** Top overall category reflecting regional expansion efforts.
- ✓ **Dramas & Comedies:** Core pillars of mainstream viewership across all regions.
- ✓ **Documentaries & Crime:** Rapidly growing niche driving high social media engagement.
- ✓ **Kids & Family Content:** Key for churn reduction among family subscriber tiers.

| Strategic Takeaways

1. Original Series Focus

While movies comprise 70% of total titles, TV shows offer higher lifetime engagement and retention. Netflix should continue investing heavily in multi-season Original TV Series.

2. Regional Localization

High content growth in regional markets (e.g., India, South Korea, Spain) demonstrates that localized storytelling with global subtitling/dubbing yields massive international growth.

Project Conclusion

Tableau Dashboard Successfully Delivered

This presentation summarized the complete analysis workflow:
from raw data ingestion to Tableau dashboard insights,
highlighting content distribution, growth metrics, and regional
dynamics.
